

Cold Chain-of-Custody Logistics Powered by

Kryo-Cart[™], KryoTruck and AirNet[™]

Safety.
Security.
Convenience.

Maintaining sample integrity during relocation or sample transfers, whether on- or off-site, requires the proper equipment and technical skill.

Kryo-Cart is a unique component of Kryosphere's cold chain-of-custody logistics. A portable workstation, large enough to accommodate an entire sample rack, our Kryo-Cart is designed for the safe handling of biological samples while maintaining a cold chain audit trail.

Our specially equipped **KryoTruck** is a mobile biorepository designed to move operating freezers off-site in a controlled and monitored environment. No need to unload freezers or pack samples in dry ice. We roll your freezer on and roll it off.

For even farther destinations, **AirNet**, our global partner, provides time-critical transportation for shipments nationwide and abroad. When every second counts, count on Airnet Systems, Inc.

Whether within your lab, across your town or state, and even beyond borders, Kryosphere is prepared to move your individual samples or entire freezers safely and securely while maintaining critical temperatures – our expert logistics staff delivers assurance throughout the journey.

Biorepository • Cold Chain-of-Custody Logistics • Management of Clinical Trial Samples
